

# Class 19 Pertussis Mini Project

Dairabel

## Web scraping

Here I extract the CDC figures for Pertussis cases in USA: <https://www.cdc.gov/pertussis/surv-reporting/cases-by-year.html>

```
library(ggplot2)
ggplot(cdc, aes(Year, Cases)) +
  geom_line() +
  geom_point() +
  geom_smooth() +
  labs(x="year", y="cases", title="Pertussis Cases in USA across the years")+ scale_y_cont
```

```
`geom_smooth()` using method = 'loess' and formula = 'y ~ x'
```

Pertussis Cases in USA across the years
